

# **DEVELOPING A MULTI-PURPOSE CADASTRE IN MALAYSIA**

Presented By

Datuk Prof. Sr Dr. Abdul Kadir Bin Taib

Department of Survey and mapping Malaysia

Email: [drkadir@jupem.gov.my](mailto:drkadir@jupem.gov.my)

Malaysia Geospatial Forum 2012, Melaka , 6-7 March 2012

# Outline of Presentation

- Introduction
- MPC Component
- MPC Core dataset
- 3-D MPC Database Development
- MPC Integration, Updating and Validation Module
- Concluding Remarks and Future Direction

# Introduction

- Multi-Purpose Cadastre (MPC) has a potential to support spatially enabled government, private sectors, and society and to expand computer support in the process of visualization, organization and management of useful land information.

# Cont...

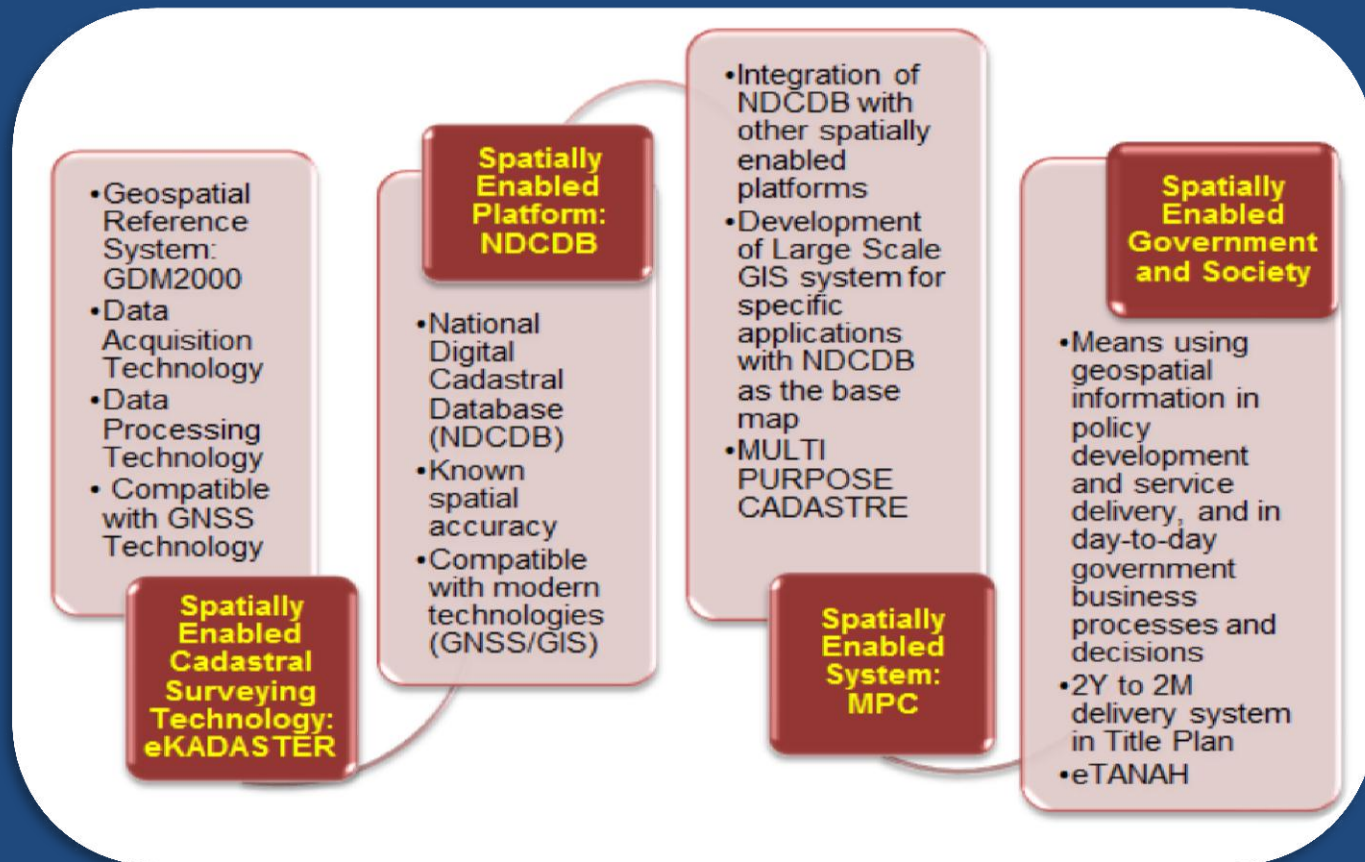

- The content of survey accurate MPC is principally survey-accurate National Digital Cadastral Database (NDCDB) that have been populated, adjusted and undergone quality checks at every level of its formation and large scale geospatial datasets that mostly will be acquired from measurement of mobile terrestrial laser scanner survey.
- Survey accurate MPC is a spatially enabled system that integrate land information system which containing survey accurate cadastre, topography, man-made features and cultural (e.g., land use, demographics) information in a common and accurate reference framework.

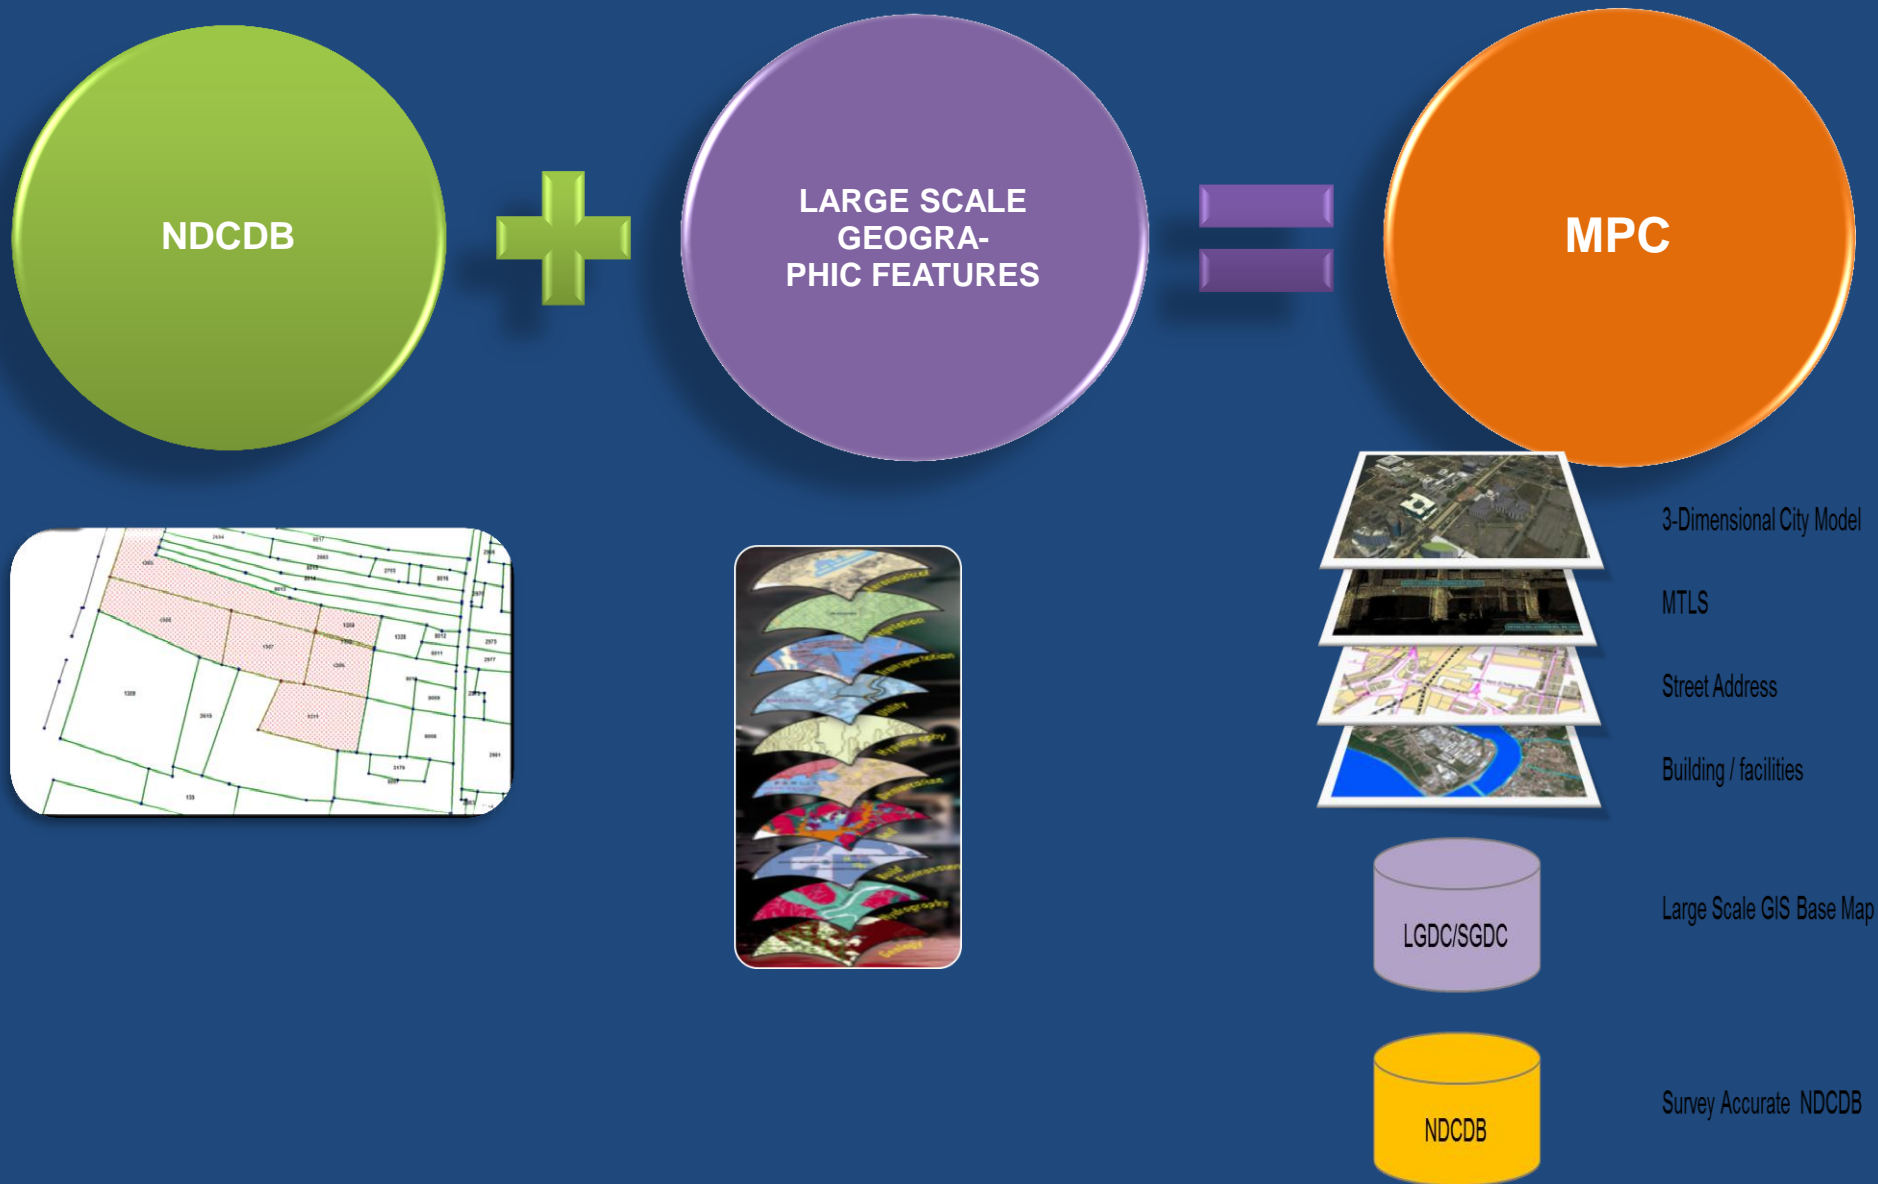

MPC GIS Large Scale Base Map

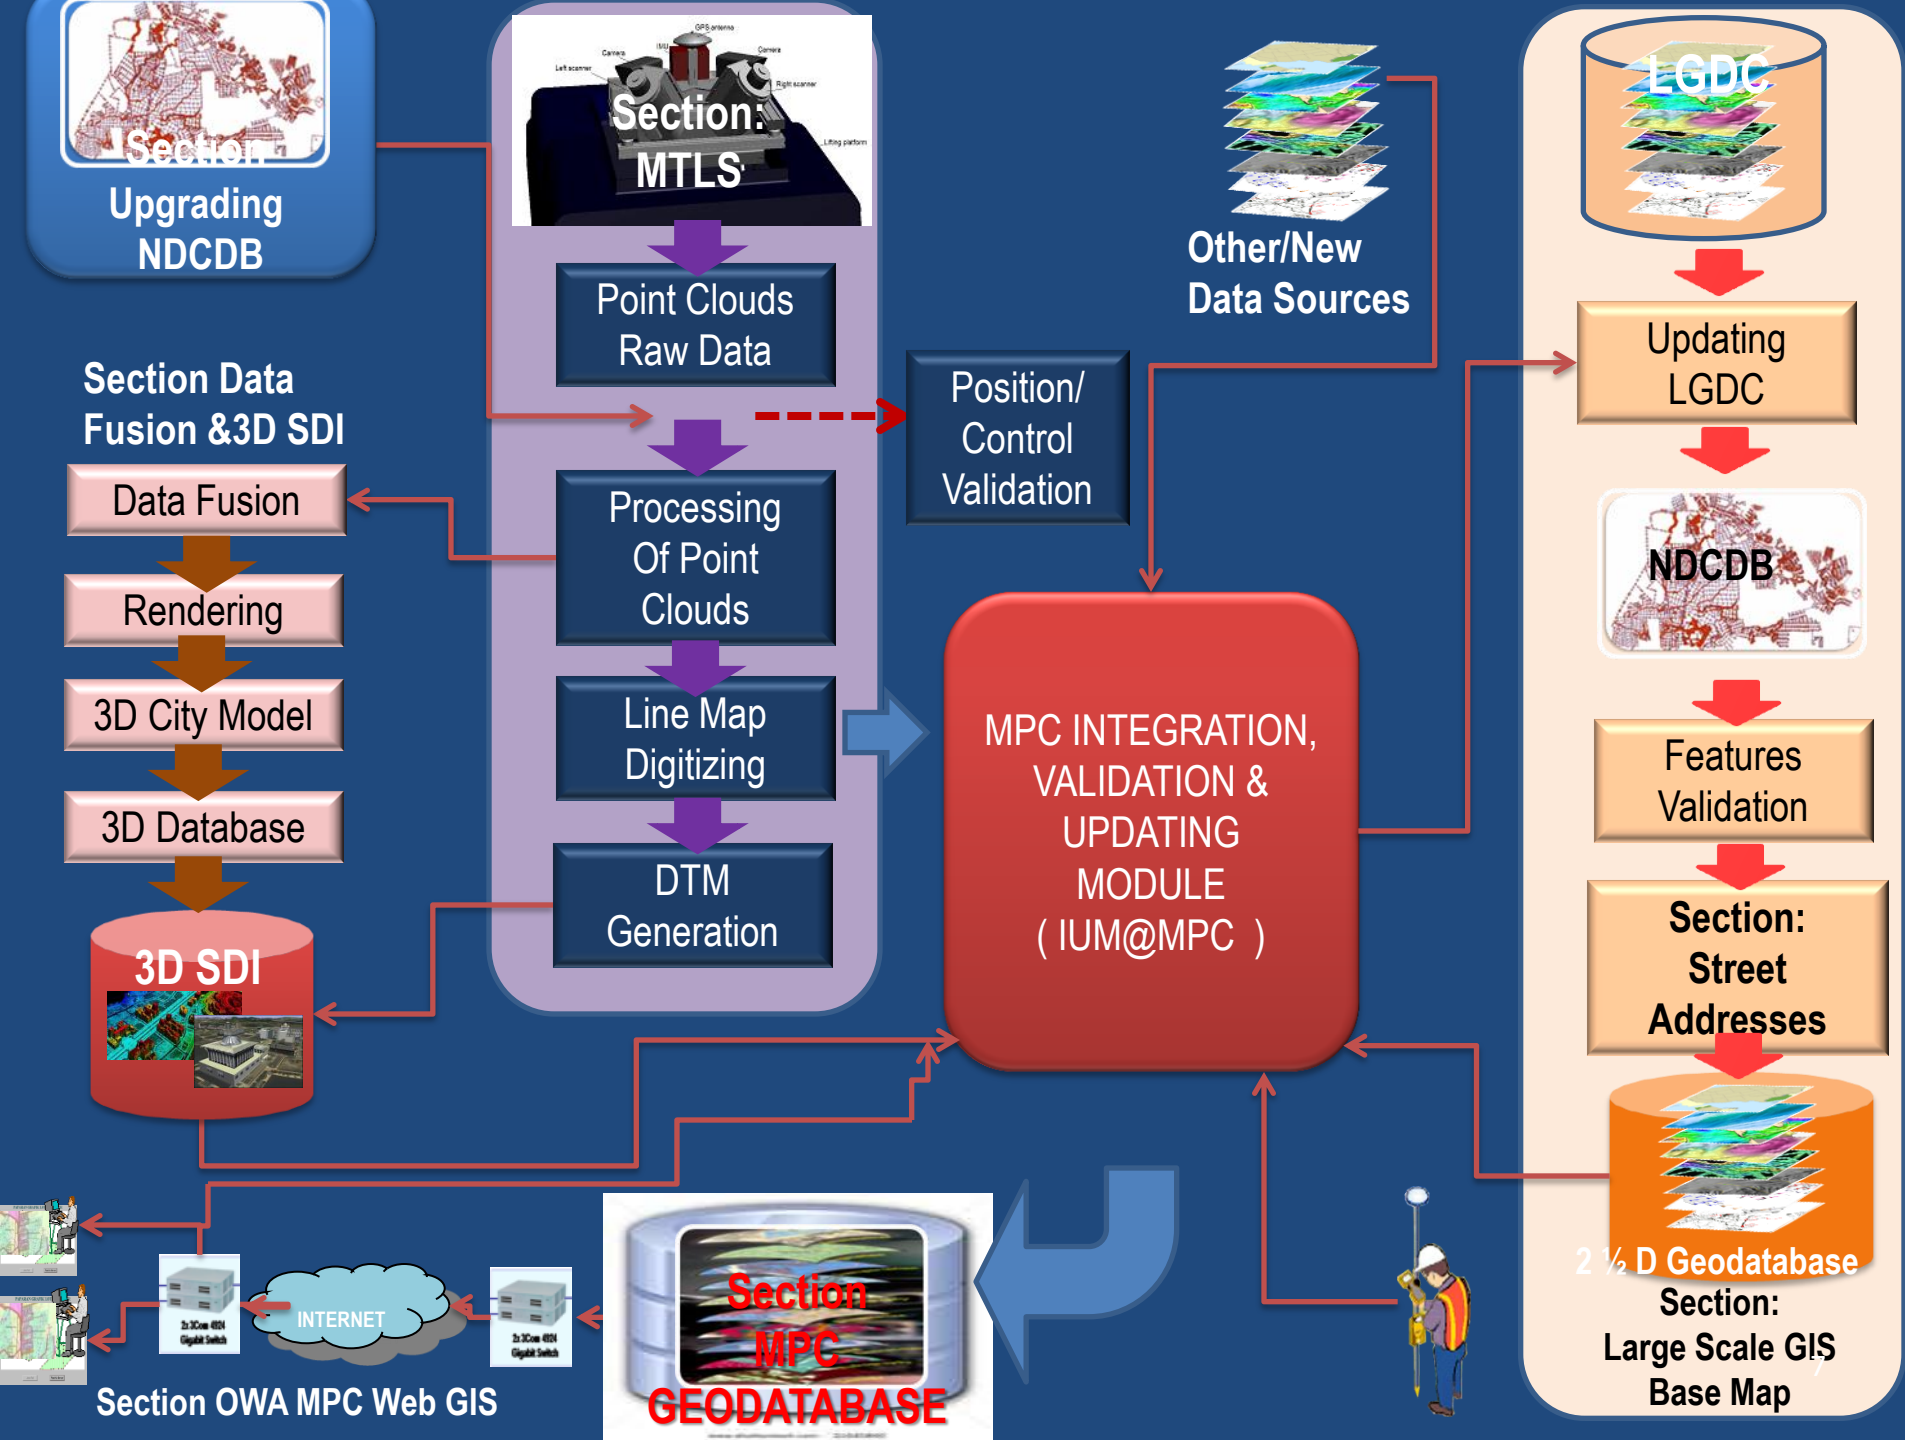

# MPC Component

- MPC component as shown in Figure 1 provides the means for enhancement of delivery system to the public as well as realization of connected government.

# MPC Component

PHASE	DETAILS
<b>1. NDCDB</b>	Refinement and enhancement of existing NDCDB. NDCDB will provide a survey accurate fundamental layer in MPC.
<b>2. Large Scale Geospatial Data Acquisition</b>	MTLS will be used to capture large-scale spatial features such building, road, utility, vegetation and others features during the survey. MTLS is a main source of spatial data for MPC.
<b>3. Large Scale GIS Base Map</b>	Local Geospatial Data Centre dataset that consists of large scale topographic map and other GIS layer.
<b>4. MPC Module</b>	Application modules for integration of multiple data sources, validation of MPC database and updating new spatial features.
<b>5. 3D-SDI</b>	Applying data fusion method to generate 3D city model and 3D SDI using available large scale MPC database.
<b>6. MPC Database</b>	MPC database will consists of various geospatial datasets with the following compliance: i)MS 1759:2004 Geographic Information/Geomatics - Features and Attribute Codes; ii) MS 2256:2009 Geographic Information /Geomatics - Guideline for the Determination of Geographical Names; iii) MS ISO 19115:2003 Geographic Information Metadata Referencing by Coordinates Unique Parcel Identifier (UPI); iv) GDM2000 - Geocentric Datum for Malaysia, v) Colour Code and Symbol (DSMM/MaCGDI).
<b>7. Online Web Access</b>	MPC OWA will provide a mechanism for access to spatial data as well as mapping and spatial analysis over the Internet.

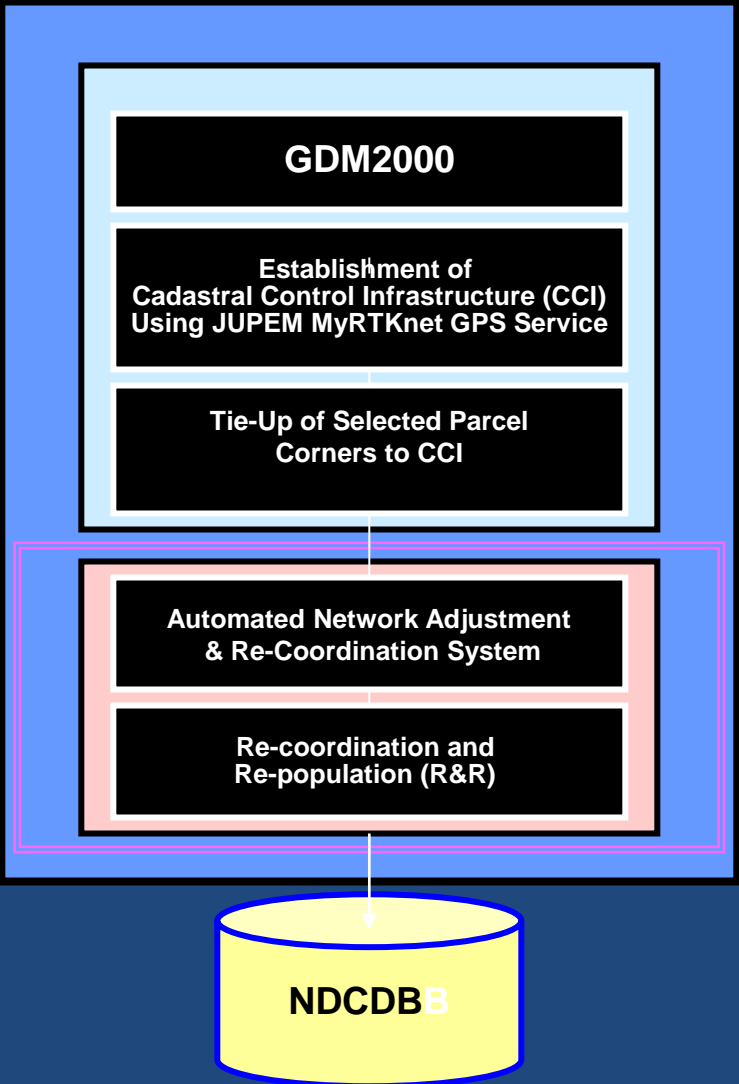

# MPC Core Dataset

## 1. National Digital Cadastral Database (NDCDB)

- The main objective of survey accurate NDCDB is to maintain a homogeneous spatial accuracy of cadastral boundary coordinates to better than 5 centimeter in urban area and better than 10 centimeter in semi-urban and rural areas
- NDCDB is the most important element in the development of large scale geospatial database in Malaysia and will facilitate the development of large scale Spatial Data Infrastructure (SDI).

# Methodology For Cadastral Data Migration To The New Geocentric Datum For Malaysia (GDM2000)

Expected NDCDB Spatial Accuracy

CATEGORY	Std Dev Northing	Std Dev Easting	Cadastral Control Spacing
Urban/ New Development	± 5 cm or better	± 5 cm or better	0.5 km
Semi Urban/Rural	± 10 cm or better	± 10 cm or better	2.5 km

Total estimated number of boundary marks to be re-coordinated is about 40 million boundary marks.

# NDCDB MAIN INGREDIENTS

## NETWORK ACCURACY REQUIREMENT

### PUK 2009

Obs bearing:  
 $\pm 15''$

Obs distance  
 $\pm 1\text{cm}$

CRM coords:  
 $\pm 2\text{cm}$

Adjusted  
Coords:  
 $\pm 5\text{cm}$

## NETWORK OBSERVATIONS:

bearings, distances,  
solar observation  
,etc., & accuracies

**COORDINATED  
REFERENCE MARK  
(CRM):** either new  
GPS control points or  
NDCDB coordinates (at  
every 25stns or 500m)

## DATA PROCESSING:

- Adjusted observations
- Adjusted coordinates
- Quality Control

DATA  
SUBMISSION  
ACCORDING TO  
DSMM'S  
FORMAT

### PUK 2009

16 ASCII

## 2. Large Scale 2-D MTLs based Geographic Features Dataset

- Main source of large scale geographic feature for MPC.
- MTLs 3D point clouds data is initially adjusted by post-processed kinematic GNSS procedures from separate GNSS base by a local transformation to well defined points throughout the project area to produce the final stations placed throughout the particular area.
- Point clouds will be georeferenced in GDM2000 coordinate system and Mean Sea Level (MSL).
- 3-D building extraction from point clouds requires the determination of building cues, ground elevation, building and rooftop heights.

Building Footprint Line Map  
Extraction using 3D Point Cloud

3D Point Cloud

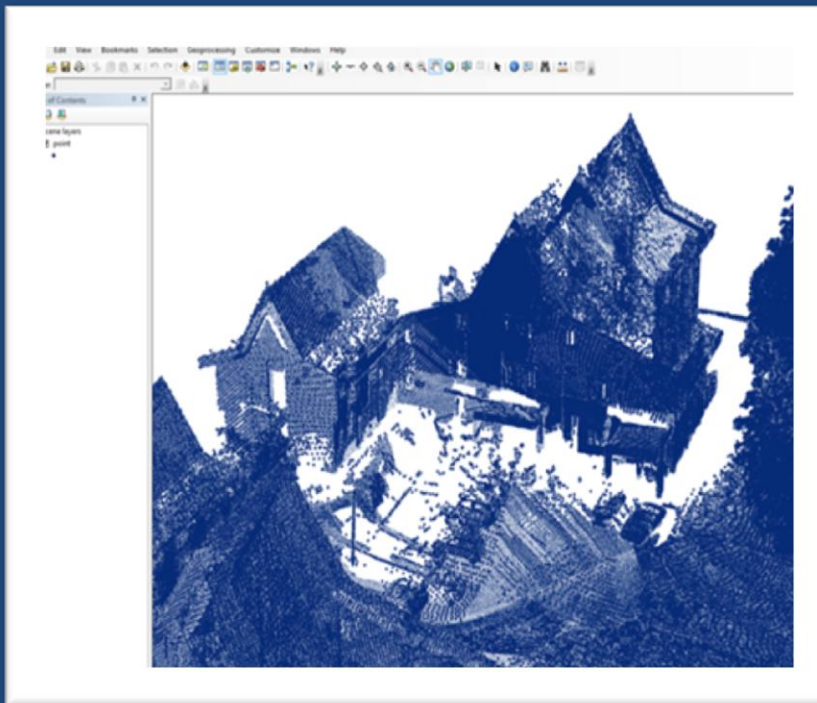

3D Features  
Information

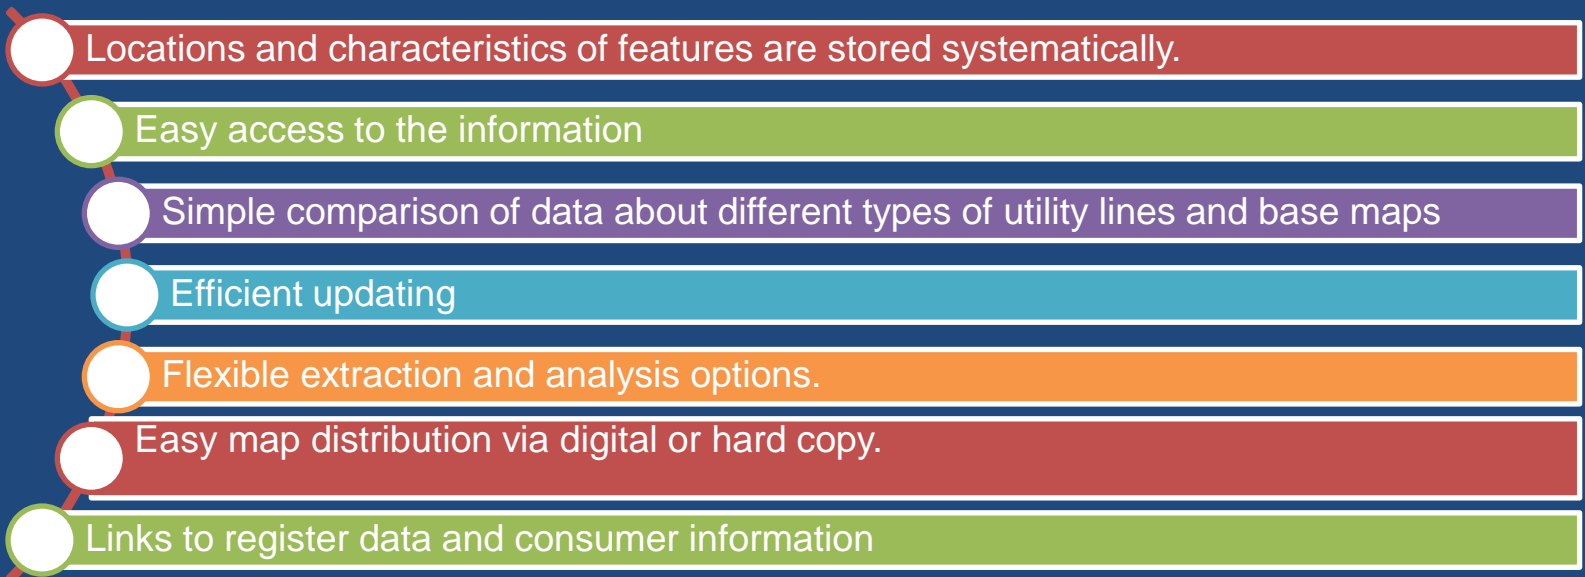

### 3. 3D City Model

- 3-D city models are becoming ubiquitous and basis for city planning, development and control.
- 3-D representations of buildings and the desired amount of detail is not limited to geometric aspects, but also includes semantic information about the facade.
- Building areas covered by dense and accurate measurements are used to model spatial features such as ground, buildings, transportation network, bodies of water, city furniture, electric power lines, and vegetation objects.

## 4. Utility Dataset

- Mapping of utility features is critical for authority in maintenance, controlling and preventive process of infrastructure development due to major investments needed for utility supply lines such as water mains, sewerage systems, telephone lines, power lines and gas mains.
- Excavation damage can be largely avoided when reliable information regarding location and description of underground utility lines are available.
- Repair and replacement of utility lines can be carried out in the optimal manner with efficient GIS/utility mapping system.
- GIS/Utility mapping systems contribute to benefits of MPC in term of the following criteria:

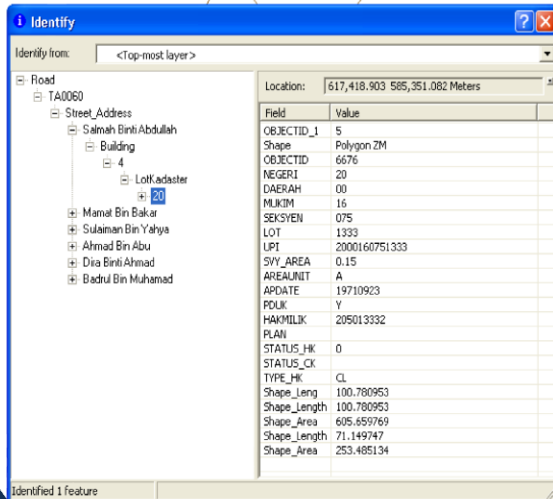

Large Scale Utility Dataset

Utility Map

## 5. Street Address

- Address is an important information required to support realization of ubiquitous MPC.
- NDCDB consists of cadastral lot information, UPI and newly created Object Identification (OID). OID also will be created for building features.
- Geocoding process can be conducted systematically using cadastral lot number, UPI and OID .These information can be linked to zip, postal or situs method to generate street addresses based integrated MPC GIS base map.

## Relationship between Road, Street Address and Cadastral Lot Using UPI and OID

Information related to Road, Street Address and Cadastral Lot

Layers

## 6. State Geospatial Data Centre (SGDC)

- MPC for rural area could be developed using SGDC dataset as a core geospatial data input. This is due to the creation of SGDC dataset at macro level of larger map scales at 1:10,000 and 1:25,000 for planning and control of any development in state region.
- The fundamental geospatial dataset consists of twelve (12) main categories that comply to the Malaysian Standards as follows: i) MS 1759:2004 Geographic Information / Geomatics - Features and Attribute Codes; ii) MS 2256:2009 Geographic Information / Geomatics - Guideline for the Determination of Geographical Names; iii) MS ISO 19115:2003 Geographic Information- Metadata Referencing by Coordinates, Unique Parcel Identifier (UPI); and iv) GDM2000 - Geocentric Datum for Malaysia.

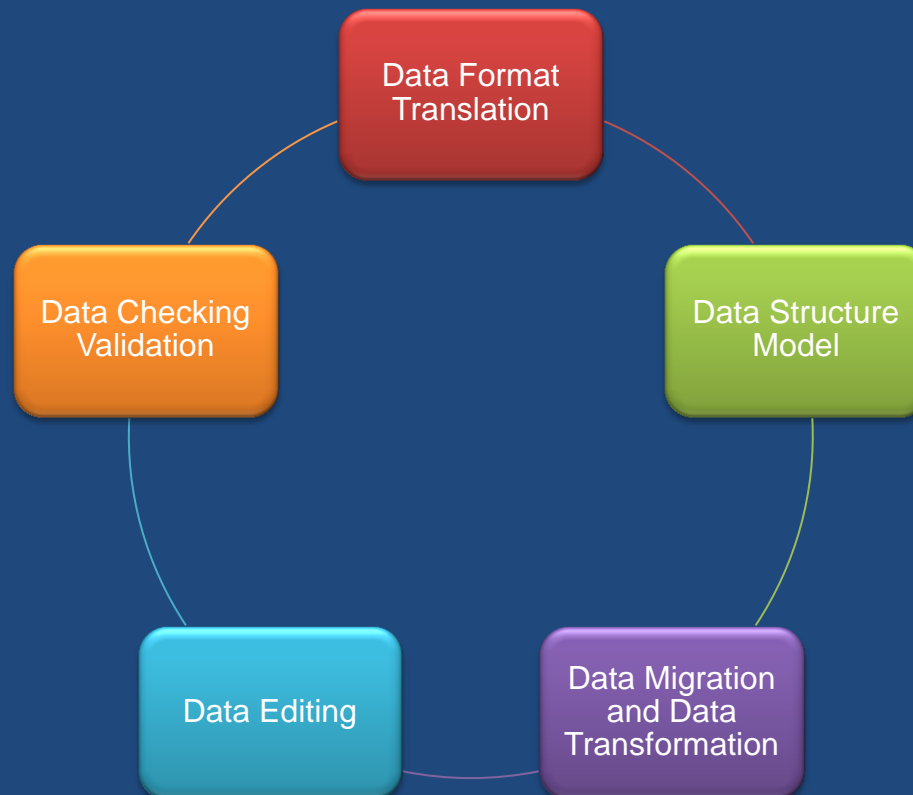

## SGDC Categories

# 3-D MPC Database Development

## 3D MPC Geodatabase

- ❁ FT Putrajaya MPC Database development will apply and comply to a Malaysian Standard for Geoinformatics/Geomatic.
- ❁ The development of MPC database includes five (5) functional processes as follows:

# 3-D MPC Database Development

## DATA FORMAT TRANSLATION

- Format Conversion
- Sorting of Feature Class
- map Scale

## DATA STRUCTURE MODEL

- Generating Data Structure based on MS1759 & Open Architecture

## DATA MIGRATION

- Data Structure Model :MS1759
- Geodatabase
- Unique feature ID
- Geometry Merging
- MyGDI Standard
- Seamless Process

## TRANSFORMATION

- Coordinate Transformation of existing geospatial features to geocentric based coordinate system (GDM2000)
- Automated point to point map object transformation

## DATA EDITING

- Spatial/Geometry Topology
- Attribute Editing

## DATA VALIDATION

- Accuracy relative to NDCDB
- Topology
- Overlay result
- Consistency
- Completeness
- entity-attribute agreement aspects

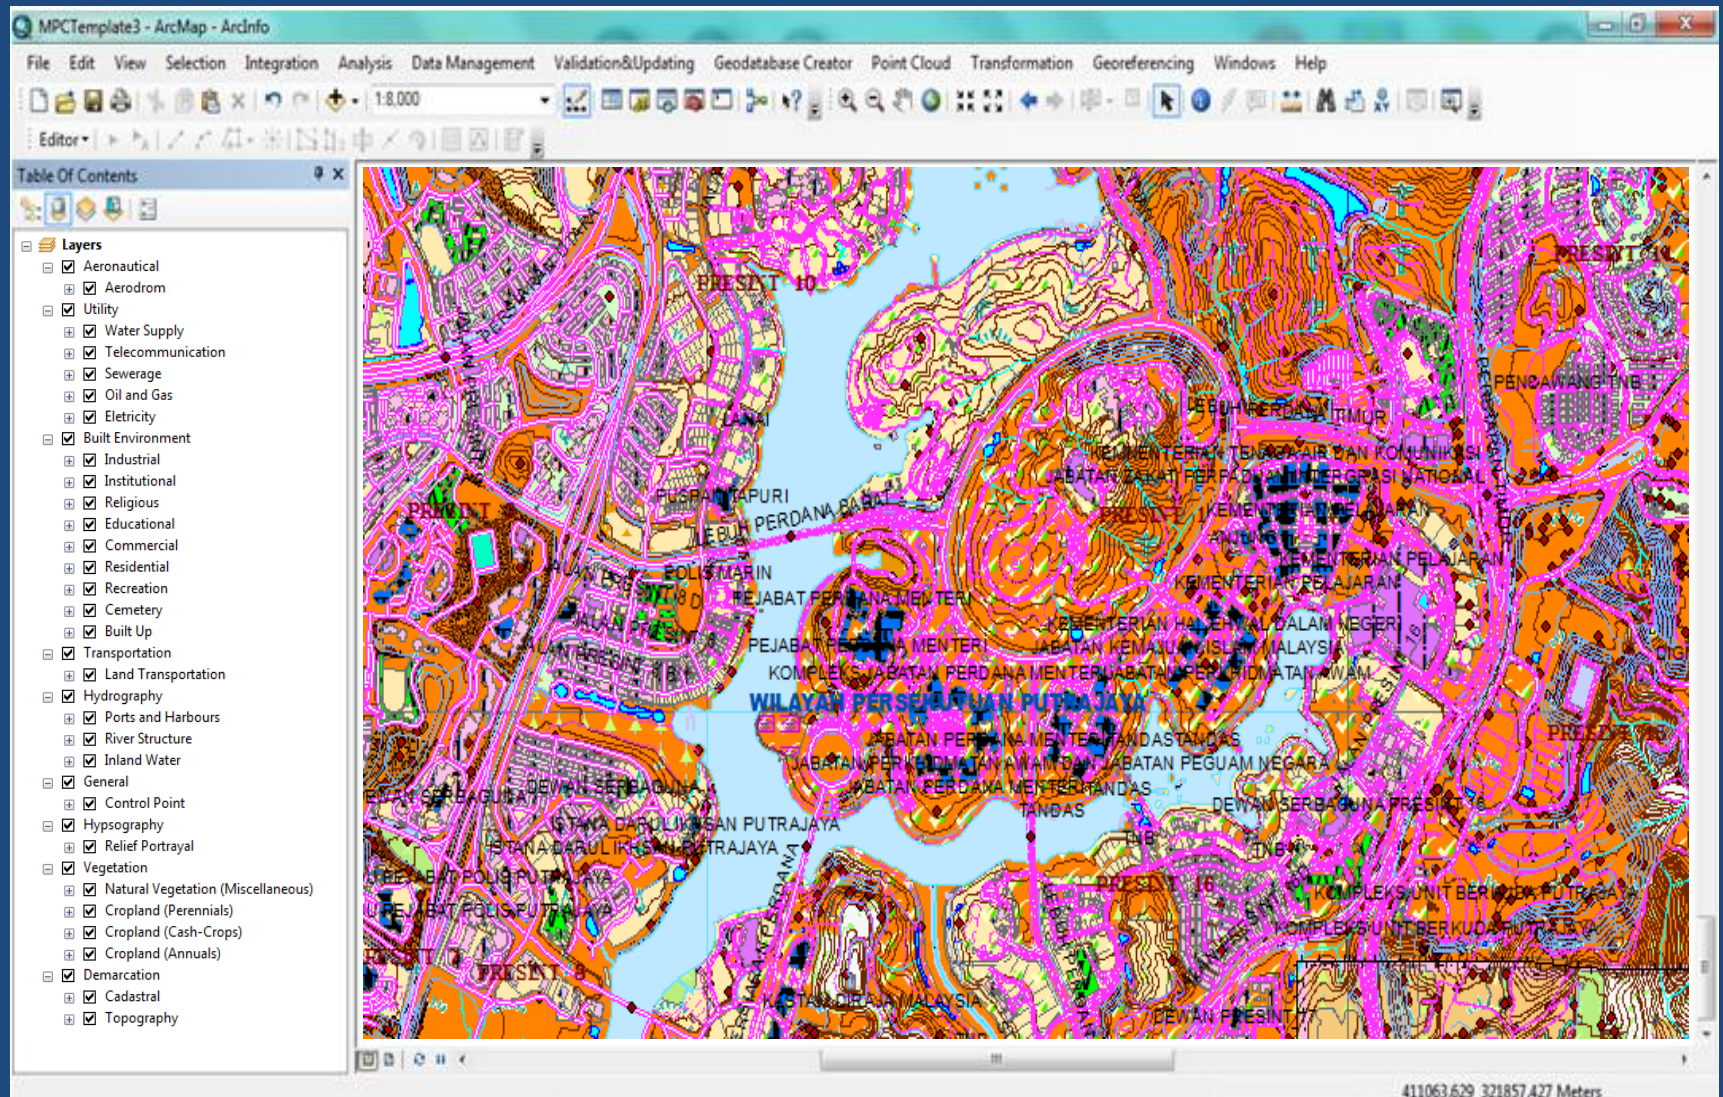

## LARGE SCALE MPC DATABASE

- Compliance to DSMM & MyGDI Standard
- Spatial correlation with NDCDB
- MPC Database

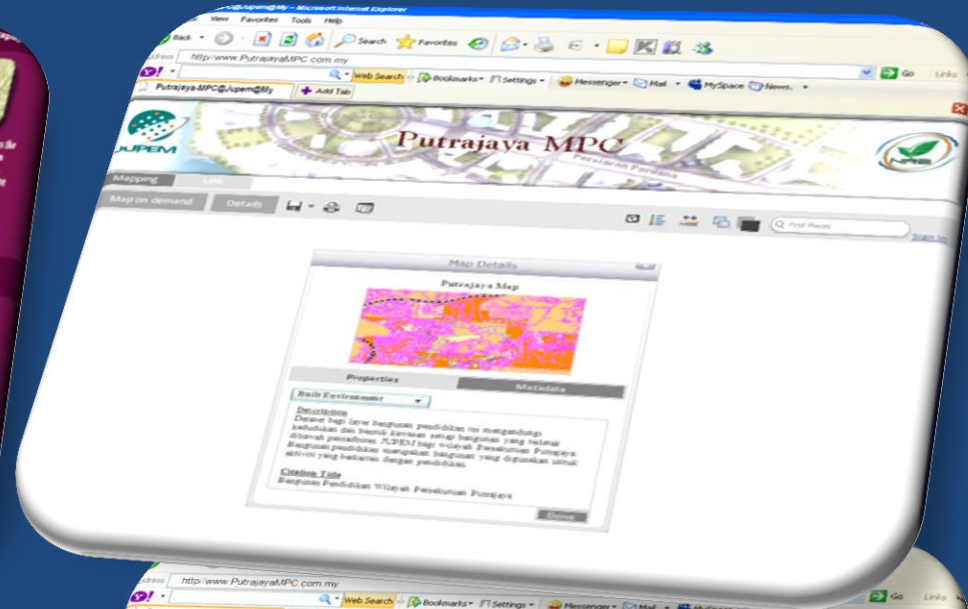

# MPC Integration, Updating and Validation Module

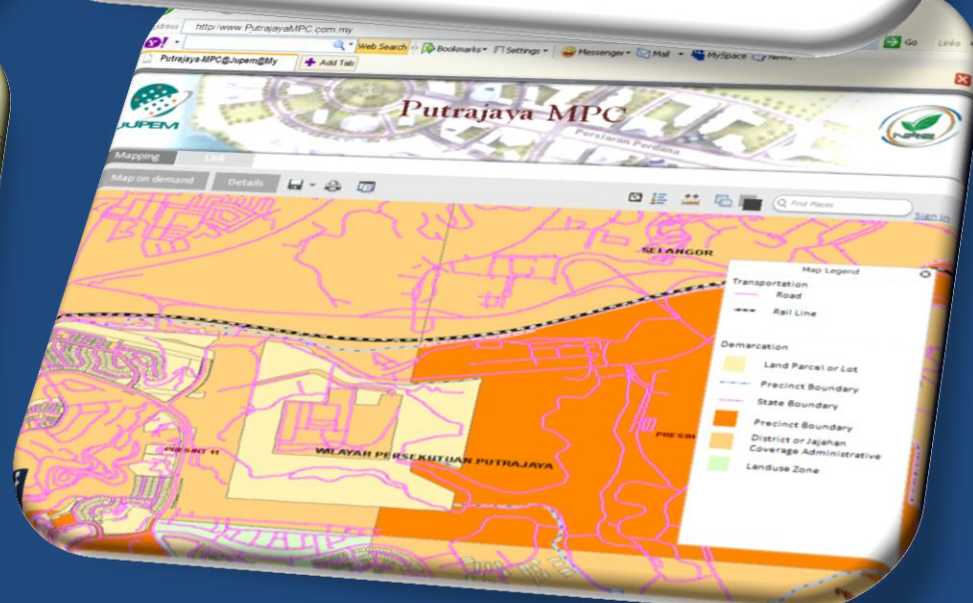

# MPC Integration, Updating and Validation Module

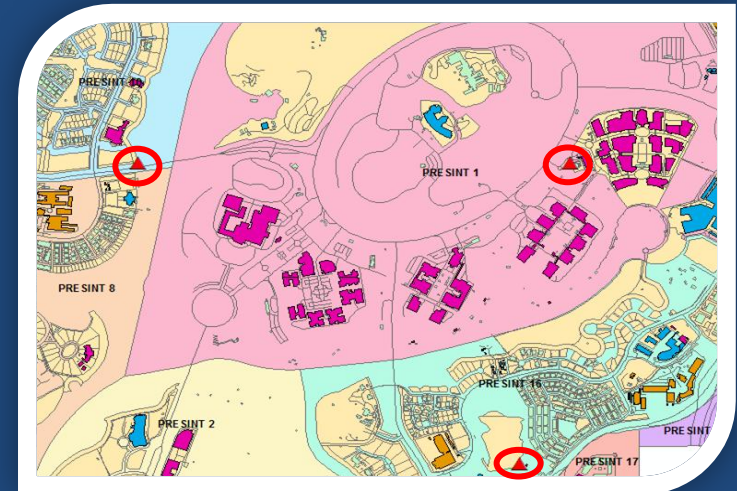

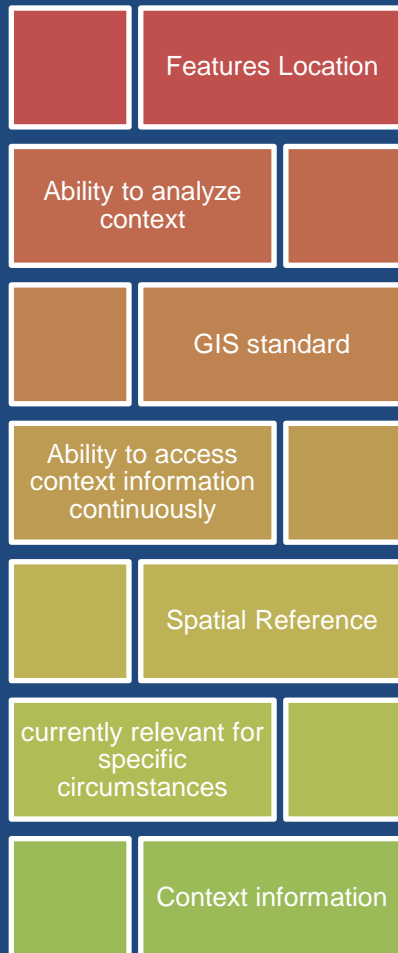

MPC Database

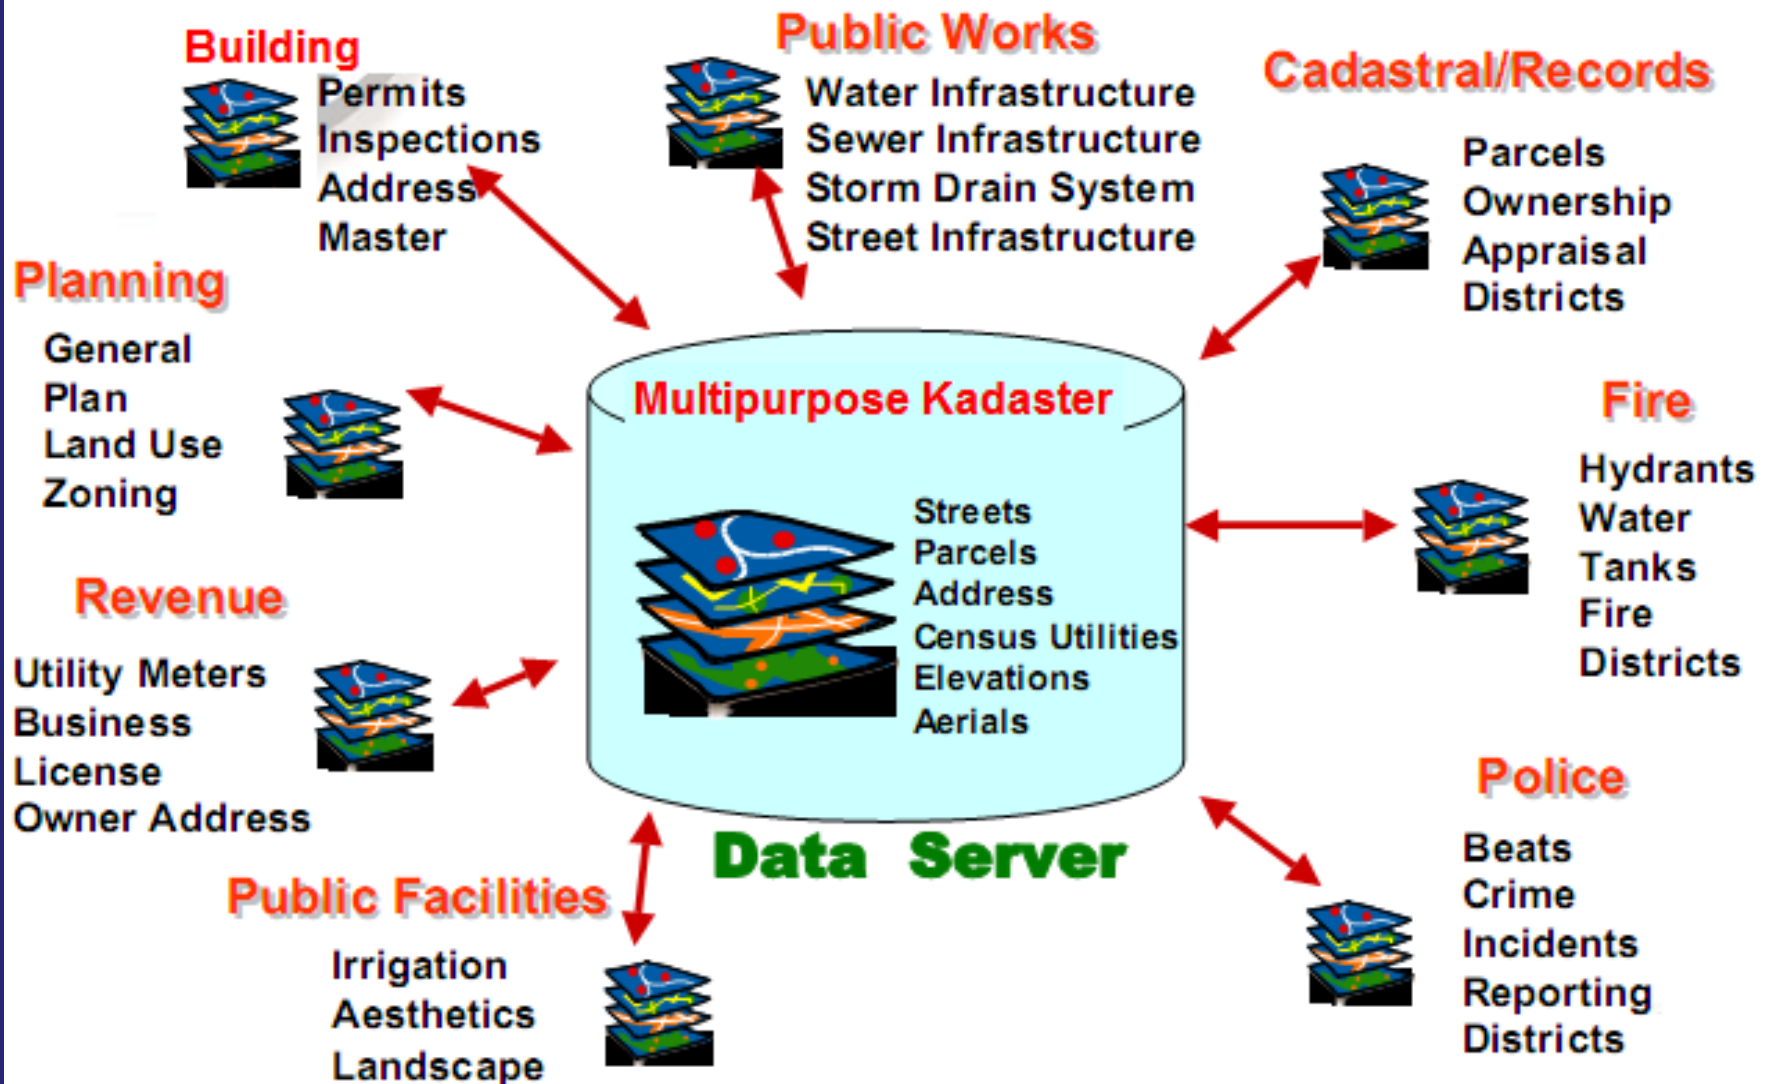

MPC OWA

- ❁ Online Web Access (OWA) is emphasis on visualization, analysis, processing of project specific geodata and exploratory aspects.
- ❁ MPC OWA is needed due to the demands of geospatial omnipresent dataset such as cadastre parcel, building, road and thematic map (from data fusion method).
- ❁ The MPC OWA will consists of the following:

# Benefits of MPC

## **Other Benefits of MPC**

- **Property Inventory**
- **Project Implementation and Monitoring**
- **Crime Prevention and Detection**
- **Utility Management**
- **School Management**
- **National Identity Cards**
- **Census Mapping**
- **Population Estimates**
- **Electoral Processes**
- **Agricultural Yield Prediction**

# Concluding Remarks and Future Direction

- ❖ The key to the success of establishing MPC is continually evolving in response to the changing humankind to land relationship and demands.
- ❖ MPC must be driven by the needs from the users that critically required for survey accurate large scale data.
- ❖ MPC will support effective land development and administration, increased and sustainable economic development activities, agricultural productivity, and environmental management.
- ❖ MPC able to support different levels of stake holders at local authority, state authority and national authority for multiple decision making processes and improved delivery system to the public.
- ❖ The pilot project towards the development of MPC for Putrajaya will provide informative insight on the future direction in implementing nationwide MPC and new cadastral management in Malaysia.

End of Presentation

Thank You
