Trimble Monitoring Solutions

Common request in all monitoring applications

Information

+ Time

Trend

Trimble Monitoring Solutions

Different jobs require different sensors

- Optical Total Stations
 - High accuracy positioning
 - Can observe multiple points
 - Relatively short distances <2,5km
- GNSS Sensors
 - Large distances
 - High data rate
 - Precise differential positioning
 - Limited to one point

New Instrument and Technology

Trimble S8 with FineLock™

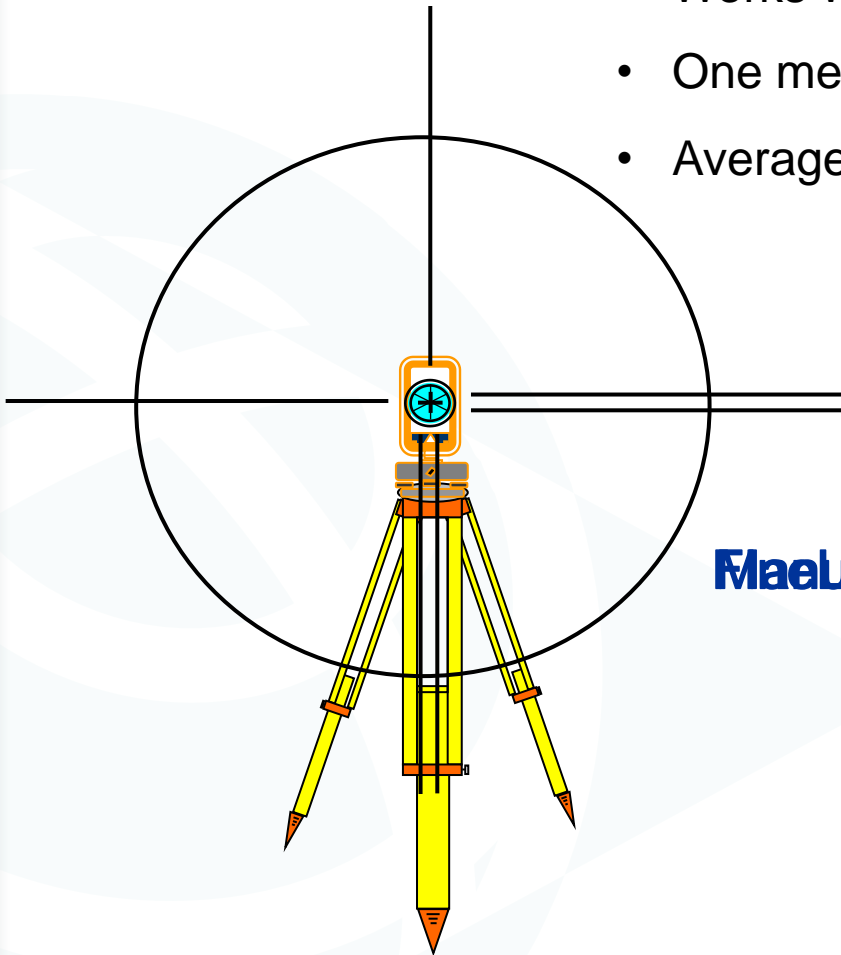

- Angle accuracy: 0.5" or 1"
- Distance accuracy: 0.8 mm + 1 ppm
- FineLock accuracy: <1 mm at 300 m
- Available as Autolock and Robotic
- MagDrive™
- SurePoint™
- Optional Long Range FineLock™
→ Accuracy: <10 mm at 2,500 m

Trimble S8 Total Station

FineLock™

- Works with 333 Hz
- One measurement takes two seconds
- Averages 670 aimings per measurement

Fast Lock Aimings in „Slow Motion“!

Trimble S8 Total Station

FineLock™

- Narrow field of view
- No interference with surrounding prisms
- Minimum separation Δ : 80 cm at 200 m

Trimble 4D Control

Applications for GNSS and optical sensors

- Optical total stations
- GNSS receivers

Trimble 4D Control

Applications for GNSS and optical sensors

- Optical total stations
- GNSS receivers
- Optical total stations combined with GNSS receivers

Examples from the real world

Zurich Central Station, Switzerland

- New rail track

Examples from the real world

Tolt Dam, U.S.A.

Type of Bridge

Cable-stayed Bridge

- © A cable-stayed bridge is a bridge that consists of one or more columns (normally referred to as towers or pylons), with cables supporting the bridge deck.

Cable-stayed gider bridge & Suspension bridge

Monitoring Item	Solution	
	Hardware	Software
Pylon Manage	Tiltmeter	© BHMS – Real-time Monitoring – Management function (ex SMS, alarm)
	Accelerometer	
	Strain gauge	
	Thermometer	
Cable Manage	Tension meter	– Trimble 4D Control
	Thermometer	
Real-time Shape Manage	GNSS	

GNSS System of Incheon Bridge

- 1) Total length of bridge : 18.4km
- 2) Connecting the Incheon International Airport (IIA) with New Songdo City crossing the Yellow Sea
- 3) Opened : October 2010 after the 52 month constructions

Cable Stayed Bridge

- 1) Main section of Incheon Bridge is the 1.48 km (80+260+800+260+80 m).
- 2) Main span length : 800m
- 3) Pylon's height : 230.5 m
- 4) The 3-cell steel box deck is 33.4 m wide and 3 m high
- 5) Approach bridge: 2.2km(PFCM)
- 6) The alignment slope of the bridge : 3%
- 7) Viaduct bridge : 8.4km(FSLM)

The world's 5th largest cable-stayed bridge

Network dimension during the construction

• Monitoring of Pylon displacement

GNSS

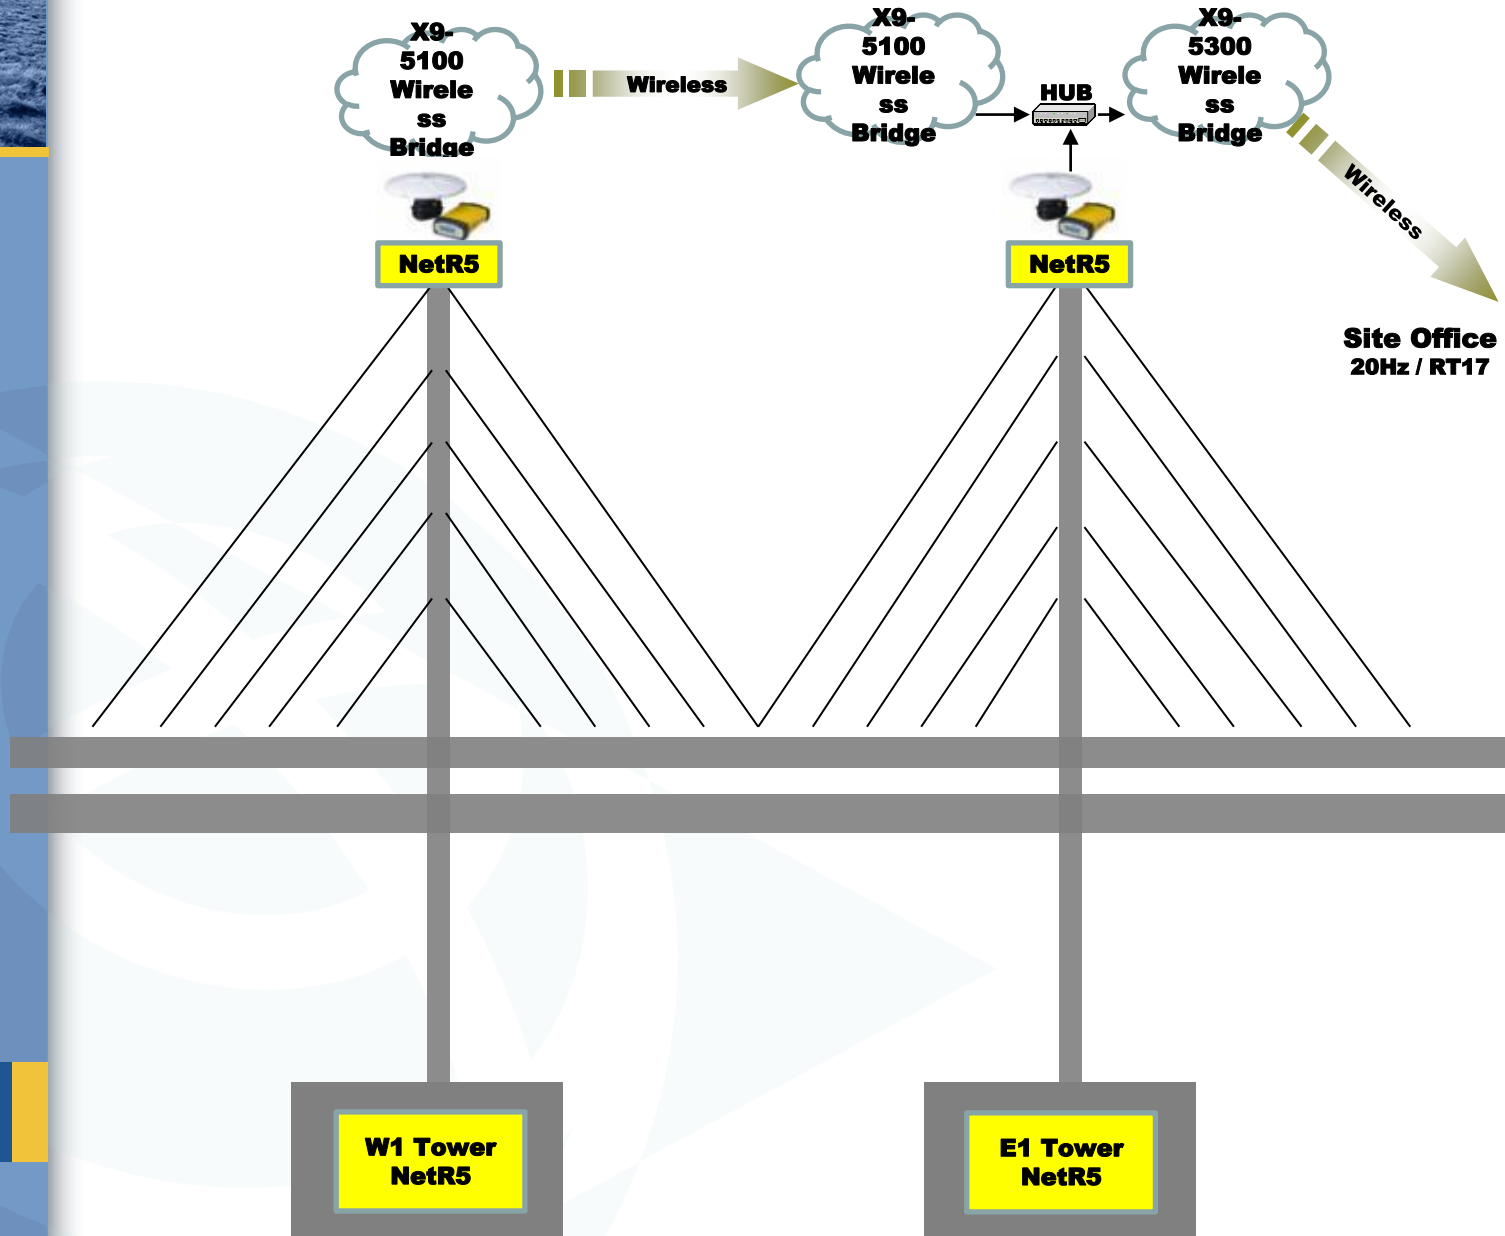

• Control of Cable Tension
• Construction of deck

• Security of the accuracy construction

Tiltmeter

Hardware during the construction

Monitored reference station

GNSS antenna point

Main Bridge Tower

GNSS & Comm Ant installation

Wireless transmitter

Structural analysis
Design checking

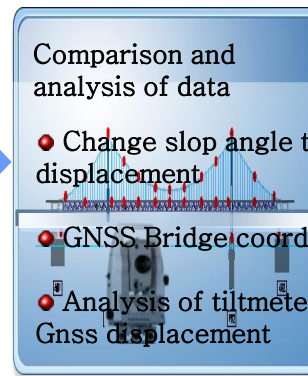

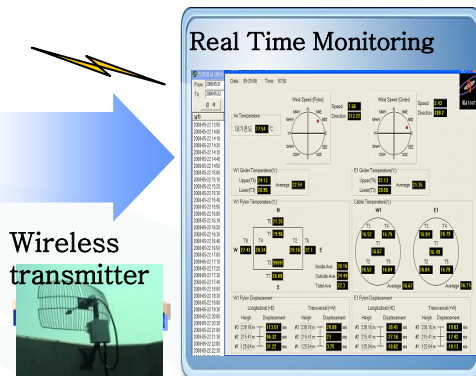

Accuracy
construction

Monitoring of Pylon
displacement

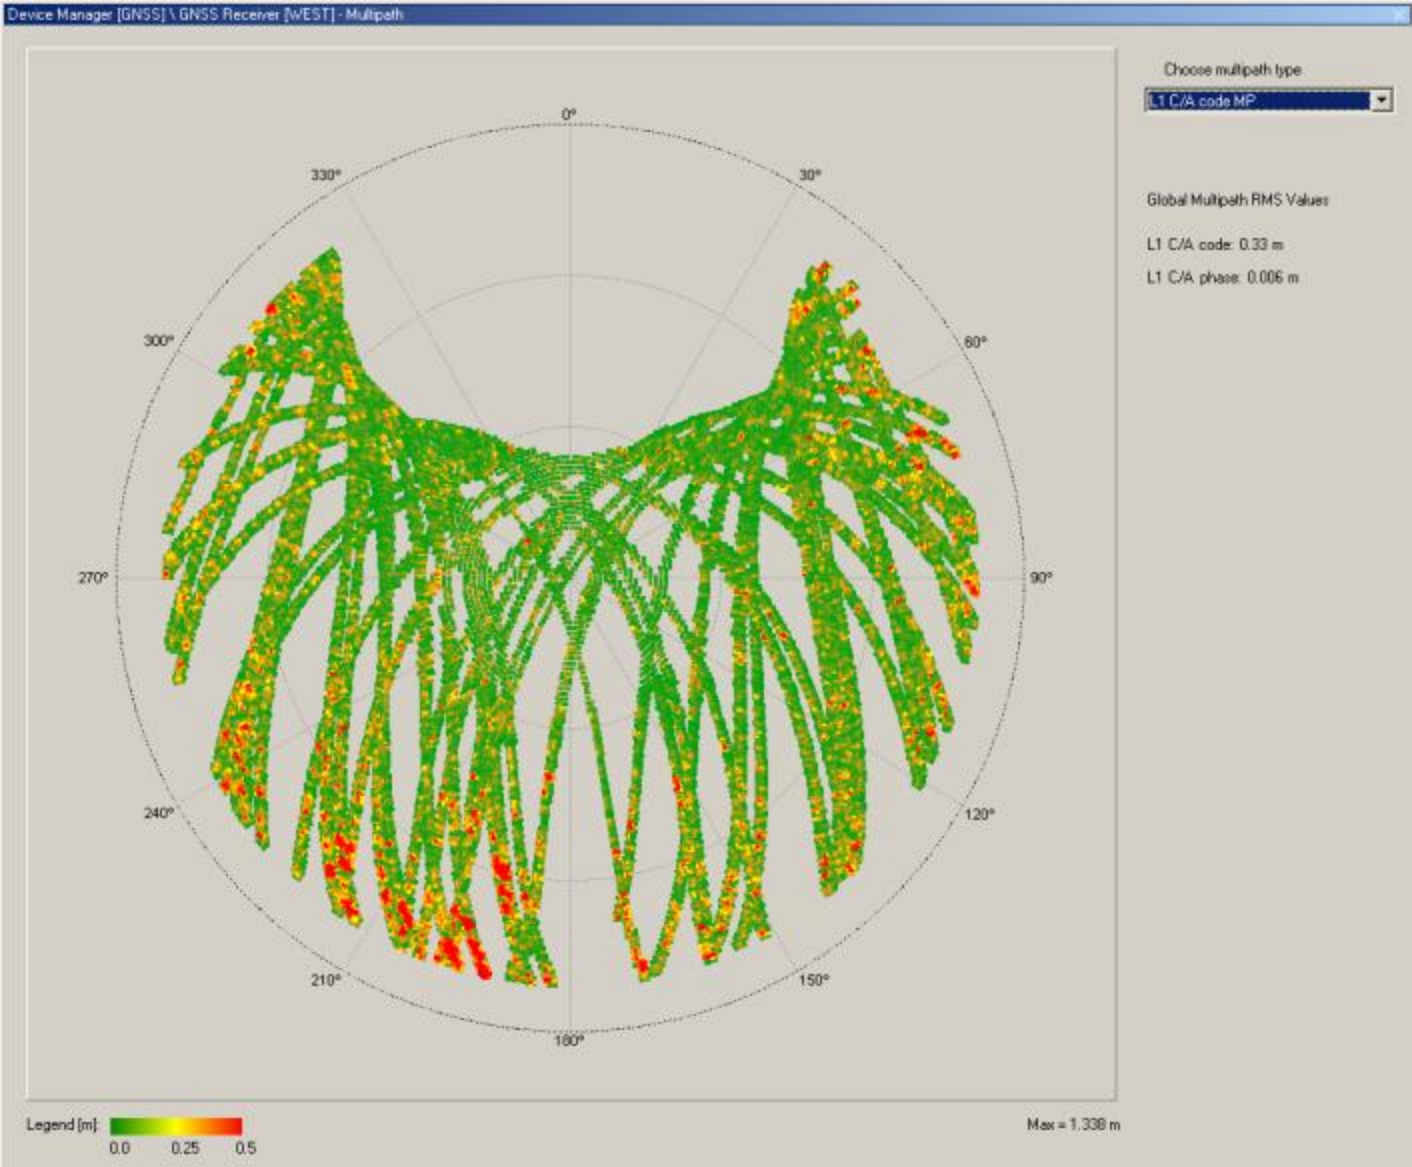

Highly effect on the efficient and accuracy constructing management

Jacking the cable according to the constructing step
Raising the deck block

±10mm Error range of GNSS and tiltmeter
Comparison and check of the monitoring and design data

GNSS Data Acquisition Program

- 1) Private software is used for collecting 20 GNSS data samples per second by RTK.
- 2) Collected data is the whole coordinates so it should be changed into bridge coordinates for shape management.
